## TECHNICAL PROFILE

I graduated from a 3–year bachelor's degree in Computer science. I expect to graduate next year from a 5–year course: Software Engineering.

## SKILLS / TECHNOLOGIES

- In my professional career I worked with Javascript, Typescript, React, NextJS, Redux, React Router, SCSS, LESS, Styled Components, Material UI, Jest, Testing Library, Storybook, Atomic Design, Webpack, and JQuery.

- I also used for personal purposes others technologies such as NodeJS, Express, Puppeteer, Cypress, MongoDB, and Amazon S3.

## GOALS

- One of my goals is to work on projects focused on different aspects; scalability, high performance, user experience, SEO.

- I also want to learn a little bit about other areas, such as backend, cloud, UI/UX. Knowing about other areas allows me to better understand the needs of the teams. In this way, I would support my work teams with greater efficiency.

## EDUCATION

**UNICEN (Universidad Nacional del Centro de la Provincia de Buenos Aires)**
**Software Engineer | 2015 – Present**
- Final Project in progress

**UNICEN (Universidad Nacional del Centro de la Provincia de Buenos Aires)**
**Software Analyst | 2015 – 2019**
- Intermediate degree from Software Engineer career
- Finished

## WORK EXPERIENCE

**Software Developer @ GlobalTask**
**September 2021 – Present**
- Currently, I'm working on a fintech project developing an application to get the "financial score" for users. I'm also contributing to a dashboard app, which is part of the project. November 2022 – Present.

- I participated, as a core member of the team, in the redesign of an entire website related to the fintech area. This application has, as its principal objective, to generate credit reports for the final user. My main tasks, besides the mentioded objetive, were related to proposing and developing improvements for UI/UX and SEO. June 2022 – November 2022.

- We created from a scratch a series of applications related to each other: one of them oriented to the purchase of BTC, an onboarding for user creation, and a back-office / dashboard for managing them. September 2021 – June 2022.

**Web UI Developer @ GLOBANT**
**February 2020 – September 2021**
- I joined the development and maintenance of a digital educative platform. My task were develop features, testing, code improvement and maintenance. February 2021 – September 2021.

- E-Commerce development, maintenance and migration from plain Javascript application to a React application. August 2020 – February 2021.

- Development, maintenance, code quality improvement and SEO for a landing page, related with an internal social media.  February 2020 – August 2020.

**Internship @ GLOBANT**
**November 2019 – January 2020**
- Development professional practices for the university
- Front End bootcamp
- First steps in the professional environment
- Final proyect: SPA using the Spotify API, Redux and the browser storage.
